

A modern bathroom interior featuring a large, black, geometric-patterned bathtub. Behind the tub is a lush living wall of greenery, including various leafy plants and ferns. Three spherical pendant lights hang from the ceiling, casting a warm glow. The scene is set on a light-colored wooden floor.

acquabella

acquabella

Welcome to Acquabella, where the combination of natural minerals, science and artistry results in design-savvy products that satisfy traditional, transitional and contemporary tastes. Bathroom tubs, sinks and shower bases that are beautiful, functional and durable.

Acquabella products go beyond form and function with ingenuity, texture and geometric patterns to create the unexpected. Rooted in a strong European design ethic, Acquabella's international designs bring the best of all worlds to customers' bathrooms.

THE MATERIAL & PROCESS

Acquabella's mineral composite material consists of organic dolomitic limestone, a rock that is very hard and durable.

The ground minerals are combined with a high-grade casting resin, or binding agent.

The mixture is liquefied and poured into a mold that has been prepared with a specially-formulated thick coating.

In the curing process, the two are chemically bonded.

This cast stone product is then hand finished.

The non-porous, thick, hard surface contains high-performance properties that make it UV-, stain-, mold-, mildew- and impact-resistant.

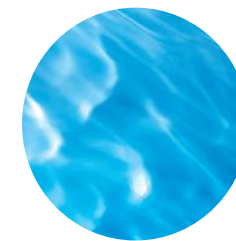

Durable and easy to clean and maintain.

COLORS & FINISHES

Acquabella tubs and sinks are manufactured with a white glossy finish, and can be optionally ordered with an exterior matte white, matte gray, matte sand, matte charcoal or matte black finish to match Acquabella shower bases.

HYDROTHERAPY OPTIONS

SOAKING BATH

The most elemental form of hydrotherapy is the soaking bath, where heat and water's natural buoyancy foster deep relaxation. All Acquabella soaking tubs are ergonomically designed for maximum comfort and our mineral composite material helps keep bath water warm longer.

AIR BATH

The blissful combination of water, heat and air movement creates an incomparable effect that is as therapeutic as it is relaxing. The movement of millions of tiny air bubbles contacting the skin activates the lymphatic system, increases blood flow, stimulates endorphins and relieves sore muscles and other painful ailments. Air flow can be adjusted from soft to stimulating.

tubs

Acquabella provides a range of freestanding tub models in different styles to suit various design preferences.

Available as a soaker or air bath, Acquabella tubs feature ergonomic interior designs and high insulating properties to keep the bath water warm longer for extended relaxing soaks and a full-body hydrotherapy experience.

All are produced exclusively in mineral composite material. They are beautiful, non-porous, durable and easily maintained.

shower bases

Acquabella shower bases are available in multiple sizes, natural stone textures and a palette of colors produced exclusively in mineral composite.

All are low-profile multiple-threshold — they can accept glass enclosures on multiple sides.

This design presents a very clean look while making entrance and exit easier. Their shallow threshold height also allows them to be recessed in the floor for a zero-barrier installation.

Manufactured in Spain, a country recognized world-wide for its production of excellent tile, think of these shower bases as one large slab of tile.

One-piece solid construction means no grout to replace and re-seal on a regular basis. And the non-porous, shock-resistant surface is UV- and stain-resistant for durability and easy care.

sinks

Acquabella offers a variety of bathroom sinks in different styles, shapes and textures. Vessel and semi-recessed models are designed to either mimic or complement Acquabella tub designs.

All sinks are produced using the same mineral composite material and process as tubs, resulting in vessels that are beautiful, durable and easy to maintain.
